Optimise POS to Stock Relationship

EaziStock technology allows you to configure individual Stock items to map to POS items directly or through recipes.

Optimise Purchase to Stock Relationship

EaziStock technology allows you to configure individual Stock items to map to Purchase items directly across multiple Suppliers.

Complete the Stock Movement Cycle

EaziStock's ability to control and interact with all areas of Stock Movements means you have optimum control and up to the minute data at your fingertips.

You can take full control of Stock Movements by gaining a 360 degree view of every Sale, Purchase and Transfer of Product.

Improved Productivity

Automation features particularly with regard to Data collection, advanced decision making tools, and solid business processes enable your staff to work more efficiently and cost effectively when handling Stock Transfers Movements and Counts.

Improved Intelligence

The robust analytical functionality and comprehensive suite of management reports within EaziStock allows you to evaluate and interpret Stock Management data such as Trading Account with full drill down and Stock Usage performance.

Rapid Implementation

EaziStock's open architecture can be quickly and seamlessly integrated by our team of consultants into any organization. We can work with existing sales and procurement processes and in-house systems. Along with the minimum training required you can rapidly experience improved efficiencies and performance.

Eazibatch

Due to short shelf life, Food deliveries create vast volumes of low-value dockets. Matching to Invoices is hugely time consuming. Eazibatch speeds up this process enormously with an intuitive batching process direct to your Financials.

Touch screen Stock Requisition

The Touchscreen Technology enables bar/kitchen staff to quickly generate requisitions to stores. This is accessed directly from POS with a similar look and feel to POS interface.

Data Capture Strategies

Our experienced team of business consultants can work with you to configure the EziStock system to quickly adopt or refine your existing Stock Control processes.

In addition we can advise on the implementation of best practice count and data capture treatment resulting in increased efficiencies and improved accuracy.

In-house & External Data Interchange

EziStock's open architecture means it can easily exchange data with both in-house accounting and external third party systems.

EziStock smartly integrates this data to enable Stock Managers to make more up to date and advanced decisions on Stock Usage and Stocking Levels.

Analysis & Reporting

EziStock has an expansive suite of reports that produce insightful and comprehensive management information.

The system's reports can be output to numerous formats. The Trading Account section enables the user to do Period comparisons with dynamic drilldown.

Automated POS/Purchase Processing

EziStock's automated POS and Procurement Import modules automatically imports Sales and Purchasing data.

Streamlined Paper Trail

Because everything is controlled from the Processing of a Goods Received through to Invoice, all data is digitally stored, ensuring accuracy and a complete audit trail.

Task Automation & Tracking

Users benefit greatly from the automation associated with stock control processes. Logs are maintained and monitored to ensure all actions are handled in a timely and consistent manner. EziStock's intelligent tracking technology automatically scans the system for mission critical aspects of the Sales and Procurement imports alerting users with anomalies. These alerts can be by email, SMS or an alert on specified desktops.

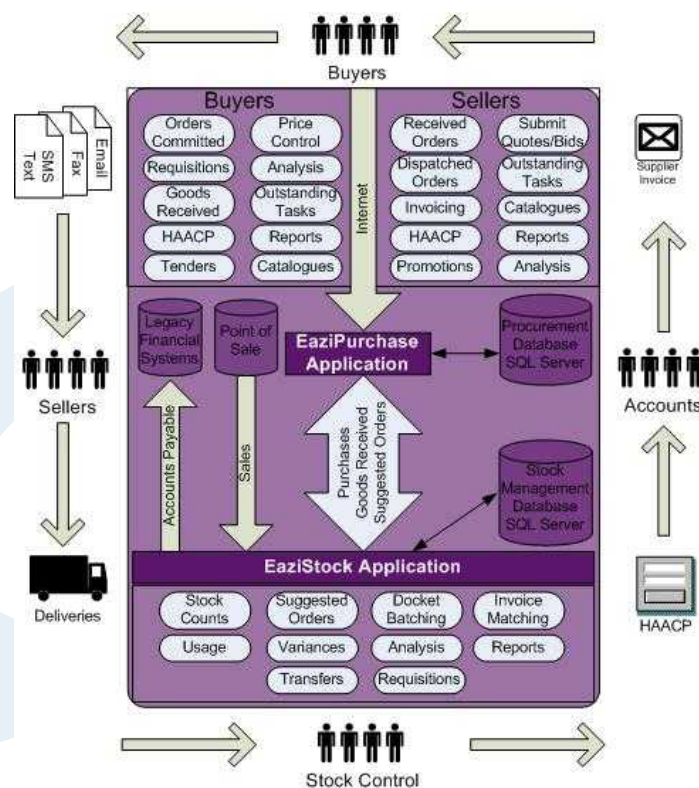

Data Security

EziStock's inbuilt security measures ensure data integrity is maintained with read/write access restrictions applied to various user type levels.

Performance Management

EziStock enables ongoing management and measurement of all activities such as Usage, Wastage, performance and costs related to management of stock products.

This assures that Stock Control is in line with management objectives.

User-friendly Functionality

EziStock's flexible and easy to use screens and familiar Microsoft explorer-based search functionality helps users to navigate with ease through the system.

Multiple Outlets/Stores Supported
